## DOCUMENTATION INTRODUCTION

### 1. OPERATING SYSTEMS:

- Aegis: SR9.7.1 Starter Sets; Advanced Sets.
- Domain/IX: SR9.7.1 Starter Sets; Advanced Sets.
- Domain/OS:

You can buy SR10 documentation for Domain/OS for a general user, system administrator, or programmer. To decide which sets to buy, consider the environment you will run in: Aegis, BSD, or SysV. The Domain/OS building block's table, following, shows the sets and the environments they support.

Note: At SR10, several products that had been optional products became part of the base software. These include Domain/IX, Network Computing (NCS, TCP/IP, and TCP/IP BSD4.2. The documentation for the SR10 version of these products are included in the Domain/OS documentation packages. You do not need to order manuals for these products separately anymore.

### 2. DOCUMENTATION PACKAGES:

Created for user convenience, these packages offer complete literature libraries for many product lines and are priced at 20% off individual list prices.

### 3. OPTIONAL SOFTWARE PRODUCTS:

Most documentation is now designed for application across all software release types. However, those documents that contain information specific to one software release are noted with a -9 or -10 suffix in the model number. Note: Binders are not included and should be ordered separately. See "D-Ring Binder" in the title index for model numbers and pricing.

### 4. HARDWARE and PERIPHERALS:

Hardware and service manuals do not require -9 and -10 suffixes.

## **SOFTWARE REPLACEMENT MEDIA INTRODUCTION**

The price list is for customers who need additional copies of software programs which they are licensed to use. Licenses must be purchased from local sales representatives.

Replacement media for DOMAIN software may be purchased when the following prerequisites have been met:

- The designated node, DSP, or DFS must be licensed to run the latest version of the desired software program contained on the media.
- Apollo reserves the right to request proof of purchase for the original software license or Basic Software Update License ( BSU ).
- Replacement media for DOMAIN software is non-refundable.
- Hard copy P.O. sent in with appropriate Terms and Conditions.
- Add appropriate media suffix to Media Model number: (-F = 8" Floppy, -H = 5-1/4" Floppy, -T = Magnetic Tape, -C = Cartridge Tape).
- Most Apollo software is available for both the SR9-based operating system releases and the SR10-based releases. Customers running Aegis on Domain/IX must order SR9-based layered products. SR9-based layered products will run on SR9.7 and SR9.7.1 (may also run on earlier SR's). SR10-based products will run on SR10 and may run on future SR10.x releases. Some products are also available for the PRISM architecture. Model numbers for media include a -9, -10 or -P must be specified.
- Product pricing and availability are subject to change without notice.
