Compaq StorageWorks™ Backup/Restore Solution for Lotus Domino

Get more from Lotus Domino

Never before has Lotus Domino been so vital to the success of your growing business. As messaging becomes increasingly business-critical, it also becomes critical to protect your data from system failures. But protecting your data usually means costly downtime for backup and restoration.

With Compaq's new Backup/Restore Solution for Lotus Domino, you no longer have to compromise. This reliable and highly scalable solution dramatically reduces downtime for backups and restores – which means your data is protected while your users stay productive.

A fast, proven solution
Combining the proven capabilities of the *Compaq SANworks™* Enterprise Volume Manager with user-customizable scripts allows you to perform quick, complete and automated backup and restore procedures. This combined solution is thoroughly tested and tuned for reliability in Microsoft Windows 2000 and Lotus Domino R5 environments. That means you can count on rapid integration and smooth operation.

Benefits at a glance

> Reduce downtime for routine backups and restores from hours to just minutes

> Exceptional scalability lets you deploy today without overbuying, even while you plan for growth

> Reduce costs by easily customizing scripts without vendor assistance

> Avoid the cost of replication servers

Compaq StorageWorks™ Backup/Restore Solution for Lotus Domino

Eliminate lengthy disruptions

Conventional tape backups and restores can require hours of system downtime. But this solution uses clone, or business continuance volume (BCV), technology to create a point-in-time copy. After creating a mirror volume of the Lotus database on the array, the solution pauses your application only briefly — for minutes while it splits off the BCV.

> **Backup reliably in minutes**
> BCV technology saves hours of downtime for backups. Once the BCV is created, Lotus restarts, and the clone is mounted on a backup server and backed up to tape. The entire process occurs in the background, without affecting application performance.

> **Quickly restore data and productivity**
> In the event of a corruption, your application is paused for mere seconds (vs. hours for conventional restores) as the server is redirected to the clone. Data is restored and users are back up and running quickly and efficiently.

Advantages you can only get from Compaq

> **Unrivaled Lotus experience**
> More Lotus customers choose Compaq servers than any other brand. In fact, over 50 percent of all Lotus Domino installations and 42 percent of all Domino and Windows NT installations run on Compaq servers. Our collaboration with Lotus and experience with Domino means you can choose this solution with absolute confidence.

> **Outstanding scalability**
> Flexible and modular, this backup/restore solution works with our HSG-based RAID controllers, so you can start smaller and grow as required.

> **Do-it-yourself customization**
> Only Compaq's Backup/Restore Solution for Lotus Domino lets you easily create and manage Business Continuance Volumes yourself — saving time and costs.
